

VALPAIN E-VOLUTION PLUS

SPECIFICATIONS

Supply and application of VALPAIN E-VOLUTION PLUS, a decorative system especially designed for coating vertical and horizontal surfaces, including in damp environments, as well as surfaces in contact with water (in bathrooms, showers, steam rooms, etc.).

The technical features of the bi-component resin that completes the cycle make it possible to obtain a continuous, walkable and waterproof surface. The product can be applied with a trowel on various substrates, such as: existing tiles, cement surfaces and plasterboard surfaces, according to the procedures specified in detail in the technical data sheets.

The application technique comprises a sequence of steps that include surface preparation, application of layers according to a scheme defined by the manufacturer, and cleaning.

The following aesthetic effects can be obtained:

- VALPAIN E-VOLUTION PLUS MARBLE EFFECT
- VALPAIN E-VOLUTION PLUS SMOOTH EFFECT
- VALPAIN E-VOLUTION PLUS DECORATIVE EFFECTS (according to the manufacturer's instructions)

The entire cycle must be performed in compliance with the application standards, including the material, the application and the preparatory work required.
